

Last Year's Trip to the OBGYN

Dysphoria,	as I've come to know, can be characterized as the persistent desire to live, and be accepted as, the opposite
sex.	Or maybe no sex. The worry to commit to one, or none, makes a home in the joints of my fingers. The people, they say, who experience
gender	dysphoria, may also desire treatment. Some androgen
hormones,	maybe, to make a cross-sex man. Injectable
testosterone	to be administered as 100-250 mg every 7-21 days. <i>Carve space on your thigh, dysphoria asks, shoulder, or ass.</i>
